AXM SMART SYSTEM OVERVIEW

The AXM, AXL400, AXM Remote Display and TruckOBM App have been designed specifically to work together in unison, ensuring easy and seamless execution in 3 steps.

3

The **AXM Remote Display** in the cab and the **TruckOBM App** installed on a smartphone/tablet, receive the trailer combination live weights from the **AXM**.

2

The **AXM** acts as the 'master gauge', collecting the weights from the truck and receiving the weights from trailer **AXL400**. Then it shares the data with the **AXM Remote** (via hardwire connection) and **TruckOBM App** (via Bluetooth).

1

The **AXL400** collects the weights from the trailer and sends the data to the **AXM**, via Wireless Technology.
